GUI Database Design Tools

From PostgreSQL wiki

Languages: **English** • 日本語 • Русский

If you're building a complicated data model, support from tools that provide for the creation of Entity-Relationship diagrams and similar techniques are extremely useful. Some tools that have been suggested as useful by the PostgreSQL community are:

- Datastudio (http://www.aquafold.com)
- DbDesigner fork (http://sourceforge.net/projects/dbdesigner-fork/)
- DbSchema (http://www.dbschema.com/)
- dbwrench (http://www.dbwrench.com)
- DeZign for Database (http://www.datanamic.com/dezign/index.html)
- Druid III (http://druid.sourceforge.net/)

- ModelRight (http://www.modelright.com/)
- Moskitt (http://www.moskitt.org/eng/moskitt0/) and its spatial plugin for PostGIS users (http://www.pgmodeler.com.br/)

- Open System Architect (http://www.codebydesign.com)

- PGmodeler (http://www.pgmodeler.com.br/)
- PostgreSQL Maestro (http://www.sqlmaestro.com/products/postgresql/maestro)
- Power*Architect (http://www.sqlpower.ca/page/architect)

- TCM - Toolkit for Conceptual Modelling (http://doc.gnu-darwin.org/usersguide/)
- Toad Data Modeler (http://www.quest.com/Toad-Data-Modeler/)

- Valentina Studio (http://www.valentina-db.com/valentina-studio-overview)

- StarUML (http://staruml.io/) with its extension for Postgresql DDL generation [1] (https://github.com/adrianandrei-ca/staruml-postgresql)

- Vertabelo (designing db online) (http://www.vertabelo.com)

- WaveMaker Visual Ajax Studio (http://www.wavemaker.com/)

- xml to DDL (http://xml2ddl.berlios.de/)

Also, pgadmin3 (http://www.pgadmin.org/) isn't a serious design tool, but can be helpful for browsing and simple additions
